SeQual: Innovators Who Stand for Quality

body copy:

Many a company is launched to produce a new and better product, but the founders of SeQual had a markedly different mission: to develop and market a dramatically improved technology.

Air separation technology was not new, but company founders created an ingenious new design that produced revolutionary efficiencies, reliability, quality and economics. To remind all of the company's mission - to seek bold new ways of doing things, driven by quality - in time they found the right name: SeQual. It expresses the company's determination to "see quality" in all its products and processes.

SeQual's revolutionary air-separation technology uses an Advanced Technology Fractionator, or ATF™, which formed the basis of its first medical product, a home oxygen concentrator.

Produced by SeQual as an original equipment manufacturer (OEM), the concentrator was marketed successfully throughout the U.S. home medical market under the label of a major American company. Since then, SeQual has developed its own concentrator line. Because its revolutionary technology is easily scalable, SeQual has also formed strategic partnerships worldwide with companies who use SeQual technology in:

- aquaculture
- food processing and preservation
- water oxygenation and treatment
- ozone production
- home medical applications.

w/ 'sparkler' quote:

"The greatest rewards come only from the greatest commitment."
- Arlene Blum, mountain climber
